

## Stripping Module for T-5000, 1.5T and 2.5T Terminators

### **Product Facts**

- Easy adjustments; Fast set-up
- Quick applicator changeover
- Can be set to crimp only, strip only or strip and crimp
- Accepts End- and Side-Feed Heavy-duty Mini-Style Applicators — 32-14 AWG
- Activated with sensor or footswitch
- Available as one unit or can be installed on existing T-3000 and T-5000 machines in the field
- Worklight is standard on factory units or available as an option when field installed

*The addition of the Stripping Module to our Terminating Machines provides an economic method of stripping wire and crimping terminals on one unit. The Stripper Module can be installed in the field or purchased from the factory as one unit. One of the many features of this Stripper Module include the placement of the stripper jaws which allows the operator after termination to "fan" or "sweep" the leads. This feature provides higher throughput with ease of operation. Also, you can operate this terminator/stripper in three separate modes: crimp only, strip only, and strip and crimp. These terminators can utilize existing end- and side-feed HDM-style applicators (with slight modification). Productivity gains can be readily realized with addition of the Stripping Module.*
